▲DV-7DL PRO SE

▲Master Room

Introduction

Toyohashi cable network located in eastern part of Aichi prefecture broadcast programs to 30,000 members.

We provide digital services other than broadcast like internet communications. We are broadcasting local information programs, sports and festivals for citizens in this area.

These are used for making local programs, mainly for introduction of restaurants and other shops. Video footage shot by people in this area is edited on DV-7DL and inserted to news program.

Point of selection

We know that requests from CATV stations are reflected to this product and used by various CATVs in our prefecture. Processing speed is the biggest advantage of this unit. We also welcome its easy operations. Because all the menu shown is easy to understand Japanese, we don't need to refer owner's manual. Cost performance is extremely high. All the operation like editing/titling/narration/BGM can be completed by one person.

System

We are using 2 units of DV-7DL PRO SE.
